

REAGAN.

Do you know that we are called hopping Monkeys
On the ground we hop like rabbits. We have feet
as long as our shins.

We are the most aggressive primates in the forest
We females, are proud about our male because they
fiercely defend us and young ones from predators
Our predators are ~~the~~ CHIMPANZEES and EAGLES
especially "THE CROWN EAGLE". We are 75%
living in Kibale forest and 25% found in
some parts of Tanzania.

We are strictly leaf eaters.

I can now reveal my name
I am called RED COLOBUS MONKEY.

Enjoy Please
Astone.
